

BLACKLINE

INTEGRATED PARTS DESIGN EDITION – BLACKLINE

Extravagant stainless steel pool design

BLACKLINE

EXTRAVAGANT POOL DESIGN

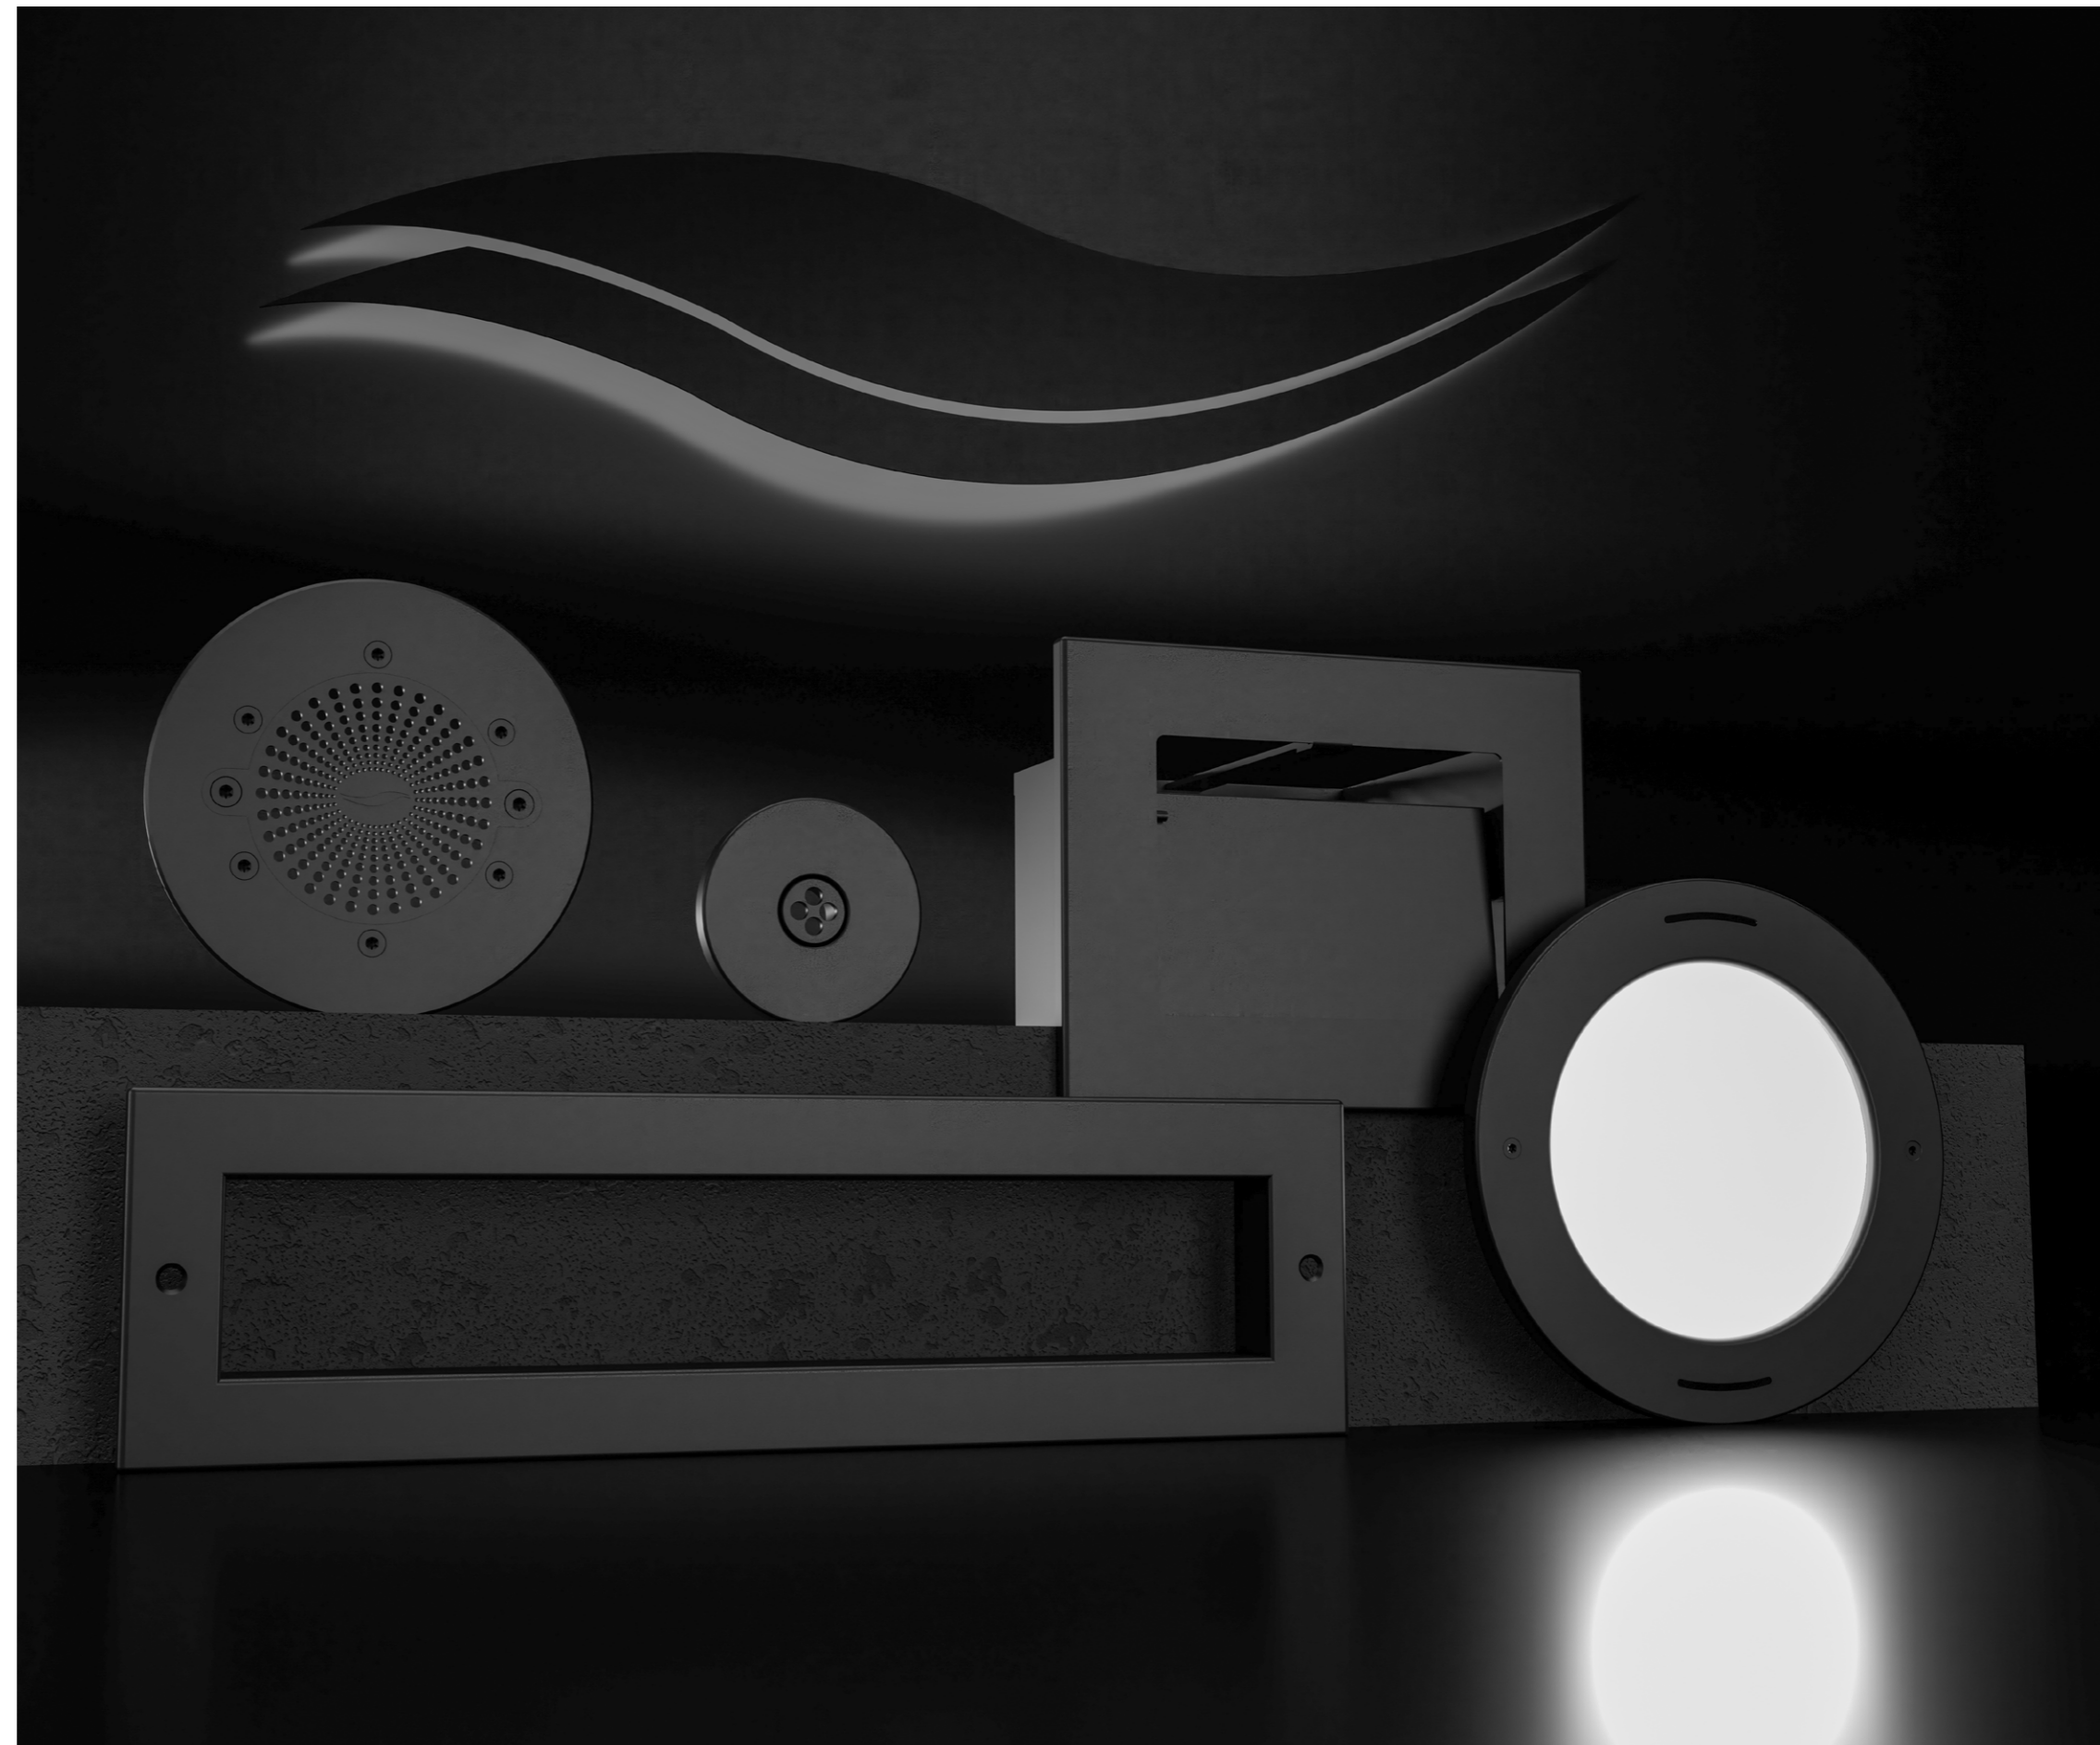

In our own manufacturing plant near Munich, the stainless steel inbuilt parts are not only visual winners. As the basic material for the products, BEHNCKE uses stainless steel, high-quality raw material AISI 316. This makes the products very durable, robust and resistant.

The pressure nozzles, floor drains and surface suction skimmer ensure an optimal flow in the pool and absolutely clean water.

The new BLACKLINE series will be available from the beginning of 2024. Individuality means freedom of choice and is trendy. That's why the idea of the BLACKLINE series for our stainless steel components was born.

This special edition combines BEHNCKE quality with individual design.

As a finishing technique, we use a special surface treatment by means of a unique process.

■ Water treatment ■ Integrated parts ■ Pool heating ■ Dehumidification ■ Pool cleaning ■ Pool + accessories ■ PVC fittings + pipes
